

Release Notes

BOHA!Ops Build 290

Contents

| | |
|---------------------------------|---|
| Issues Fixed..... | 3 |
| Data Configuration Updates..... | 4 |
| Enhancements | 5 |

Issues Fixed

1. Fixed an issue when how-To documents don't show up for some items
2. Switching between brands caused an issue if one brand doesn't have configuration data in the cloud
3. Fixed an issue with the QR codes not being properly constructed
4. Fixed an issue with the app not properly checking for internet connection on the home screen
5. Properly handle the case when the last sync date is empty in the settings

Data Configuration Updates

1. Cleaned the configuration data so it is more generic
2. Added MTO-QR category and configured the app to print QR codes for those items
3. Added more content to the MTO category

Enhancements

1. Properly detect the printer's status and prompt the user for appropriate actions
2. Long pressing on an item that doesn't have add-ons will show the quantities popup
3. Refactor how the enabled modules are detected to avoid showing the home screen for a second
